1. 개선 책

LCD에서 종류를 Kernel Module Parameter로 변경하여 , 컴파일을 하지 않고도 ,
LCD를 조정하기
Nand에 u-boot, kernel, 파일 시스템이 있을 때 사용가능

2. Fw_printenv 이용

```
http://elinux.org/U-boot\_environment\_variables\_in\_linux  
https://www.google.co.kr/webhp?sourceid=chrome-instant&ion=1&espv=2&ie=UTF-8#newwindow=1&q=read+and+modify+U-Boot%27s+environment.  
http://processors.wiki.ti.com/index.php/Update\_U-Boot\_Environment\_Variables\_stored\_in\_SPI\_Flash\_from\_Linux
```

u-boot 소스에서 tools/env 디렉토리를 컴파일 하면 됩니다.

컴파일 방법

```
./build_uboot config;./build_uboot
```

```
make -j$CPU_JOB_NUM HOSTCC=${CROSS_COMPILE}gcc
```

```
HOSTSTRIP=${CROSS_COMPILE}strip env
```

"fw_setenv" 명령은 fw_printenv 명령을 복사 또는 Soft link 하면 됩니다.

2.1. Fw.env.config파일 설정

```
# NAND example  
/dev/mtd5          0x0000          0x20000          0x20000          4
```

"fw.env.config" 파일은 파일 시스템에 /etc/ 디렉토리에 복사

테스트 결과

```
[root@(none) ~]# ./fw_setenv crz test  
Read 0x20000 bytes at 0x0 on /dev/mtd5  
Warning: Bad CRC, using default environment  
Writing new environment at 0x0 on /dev/mtd5
```

```
Write 0x20000 bytes at 0x0
[root@(none) ~]# ./fw_printenv
